

Brian Dalrymple had a 28-year career in forensic identification with the Ontario Provincial Police, retiring in 1999 as Manager, Forensic Identification Services. In 1977, he initiated and co-developed the use of lasers to detect fingerprints and other physical evidence, the extensions of which are now in global use. In 1991, he initiated the first computer image processing system in Canada and has over 25 years operational and teaching experience in this technology. He is the author and co-author, respectively of four books: *Crime and Measurement* (Carolina Academic Press, 1st and 2nd editions, 2011, 2016), *The Skin of Murder Victims* (Carolina Academic Press, 2014) and *Forensic Digital Image Processing* (CRC Press, 2018). He has tendered evidence on all aspects of fingerprint detection, photography and identification throughout Canada, and in The United States and Bermuda. Brian is an Adjunct Professor at Laurentian University, Department of Forensic Science.
